Art Unit: 1754

The election of SWNTs is noted. All claims are under consideration.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 36-68, 88-93, 130 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ruoff et al. 5547748.

Ruoff teaches nanomaterials functionalized by diazonium groups; see especially col. 8 lines 50-60. Although Ruoff does not discuss nanotubes, they are suggested by the teaching of curved surfaces having pentagons in the sheet. Thus, treating a SWNT is an obvious expedient to form a catalyst or electron emitter. The location of functionalization (claim 130) is deemed possessed or an obvious expedient, even though the reaction is preferentially at the ends where the pentagons are; the claim only requires minimal reaction at one site.
